POWERLOGIC® Power Server

PWRSRV710 and PWRSRV750 Models

User's Guide

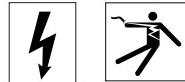

- Merlin Gerin
- Modicon
- Square D
- Telemecanique

Schneider
 **Electric**

NOTICE

Read these instructions carefully and look at the equipment to become familiar with the device before trying to install, operate, or maintain it. The following special messages may appear throughout this bulletin or on the equipment to warn of potential hazards or to call attention to information that clarifies or simplifies a procedure.

The addition of either symbol to a "Danger" or "Warning" safety label indicates that an electrical hazard exists which will result in personal injury if the instructions are not followed.

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

⚠ DANGER

DANGER indicates an imminently hazardous situation which, if not avoided, **will result** in death or serious injury.

⚠ WARNING

WARNING indicates a potentially hazardous situation which, if not avoided, **can result** in death or serious injury.

⚠ CAUTION

CAUTION indicates a potentially hazardous situation which, if not avoided, **can result** in minor or moderate injury.

CAUTION

CAUTION, used without the safety alert symbol, indicates a potentially hazardous situation which, if not avoided, **can result** in property damage.

NOTE: Provides additional information to clarify or simplify a procedure.

PLEASE NOTE

Electrical equipment should be installed, operated, serviced, and maintained only by qualified personnel. This document is not intended as an instruction manual for untrained persons. No responsibility is assumed by Square D for any consequences arising out of the use of this manual.

CLASS A FCC STATEMENT

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designated to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

CHAPTER 1—INTRODUCTION

The POWERLOGIC Power Server products provide access to real-time power system data using a standard web browser format. Two models are available—the PWRSRV710 and the PWRSRV750.

The PWRSRV710 gives you access to real-time data and information. With the PWRSRV710 you can do the following:

- View meters
- View bar charts
- View tables
- View documents
- Set user preferences

The PWRSRV750 has all the capabilities of the PWRSRV710. In addition, the PWRSRV750 has enhanced features that allow you to do the following:

- Store and view historical information
- Configure and retrieve alarm information
- Create data diagrams and view them

This manual tells how to use the Power Server's browser-based user interface to view system information from the optional touchscreen display, or from a remote PC using Internet Explorer (version 5.5 or higher).

PREREQUISITE INFORMATION COVERED IN THE POWER SERVER SETUP GUIDE

These instructions assume that the Power Server is installed, properly configured to communicate to the devices in your system, and running. For Power Server installation and setup instructions, see the Power Server Setup Guide (instruction bulletin 63230-216-207). Also refer to the Setup Guide to perform the following tasks required for procedures covered in this User's Guide:

- Using NetMeeting to access the Power Server. Refer to “Starting NetMeeting” in the Power Server Setup Guide 63230-216-207.
- Pressing **Ctrl-W** to display the Power Server desktop. Refer to “Configuring the POWERLOGIC System” in the Power Server Setup Guide 63230-216-207.
- Putting the Power Server in Setup Mode. Refer to “Changing the Mode from Run to Setup Mode” in the Power Server Setup Guide 63230-216-207.
- Putting the Power Server back in Run Mode. Refer to “Changing the Mode from Setup to Run Mode” in the Power Server Setup Guide 63230-216-207.

TERMINOLOGY USED IN THIS USER'S GUIDE

Click vs. Touch—If you are using the touch screen display to view data, you control the Power Server interface by *tapping* tabs, buttons, etc. If you are controlling the Power Server browser from a remote PC, you use your mouse to point and *click* tabs, buttons, etc. For the sake of clarity, the instructions in this manual will use only the word *click*. If you are a touch screen user, assume that *click* means *touch*.

POWER SERVER HOME PAGE

Figure 1 depicts the Power Server home page. All screens shown in this instruction bulletin depict the PWRSRV750 interface.

NOTE: The Diagrams, Alarms, and Historical tabs do not display for the PWRSRV710 interface.

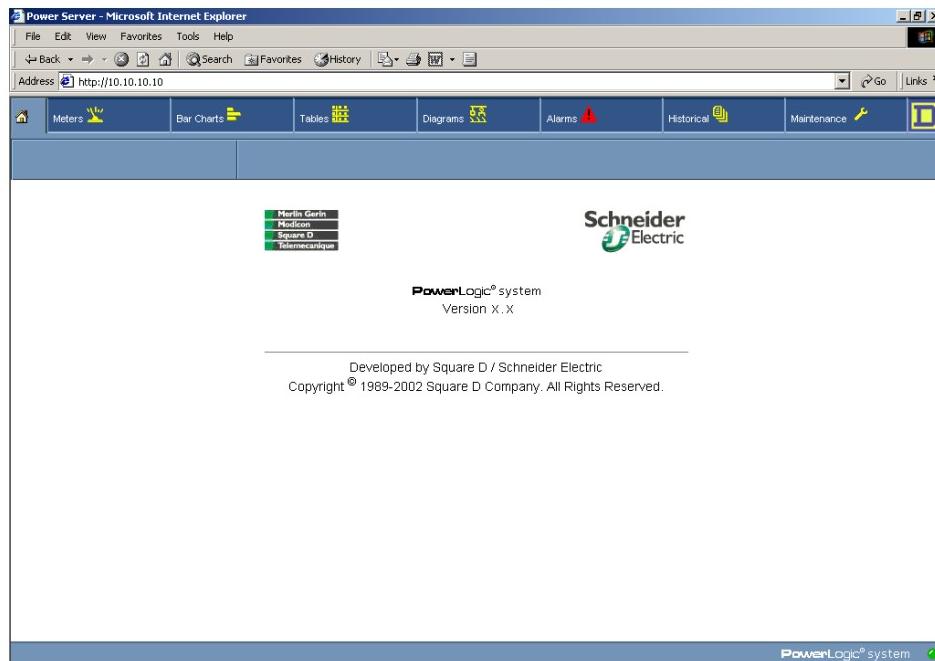

Figure 1: The Power Server PWRSRV750 home page

CHAPTER 2—BASIC OPERATION

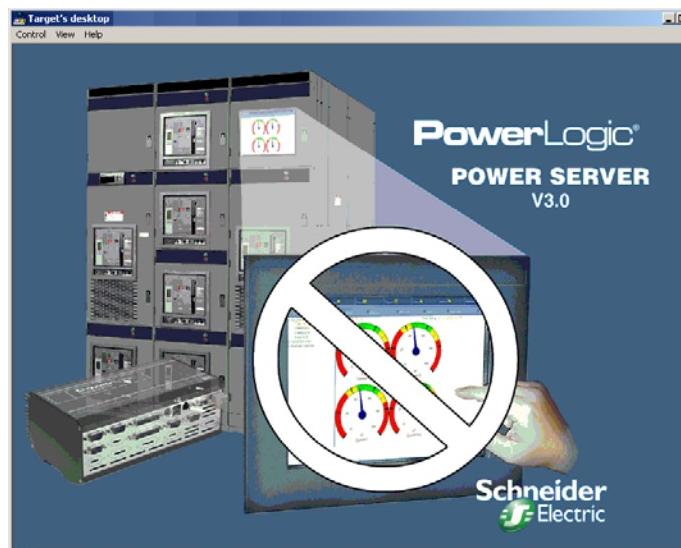

Information in this chapter applies to both Power Server models. For operation procedures that apply to Model PWRSRV750 specifically, refer to **Chapter 3—Power Server Model PWRSRV750 Operation** on page 17.

CONNECTING TO THE POWER SERVER USER INTERFACE

Connecting to the Power Server with the Touch Screen Display

If it is the first time you are using the touch screen after starting the Power Server, do the following:

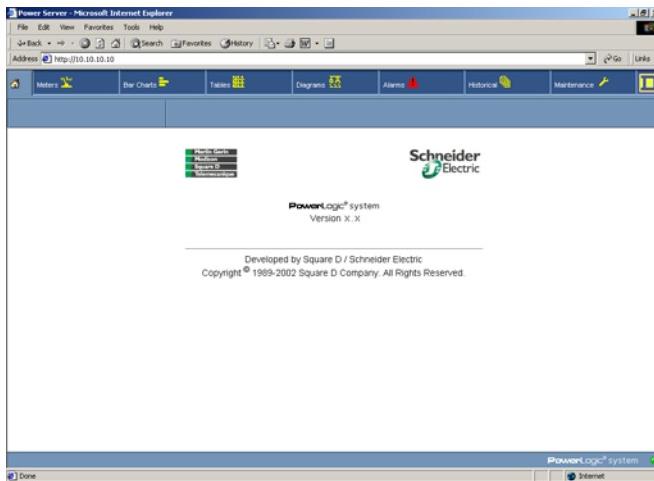

1. Wait until the DO NOT TOUCH symbol Ø no longer displays.

Then the Power Server welcome screen displays.

2. Touch the welcome screen to launch the Power Server user interface.
The Power Server Home page displays.

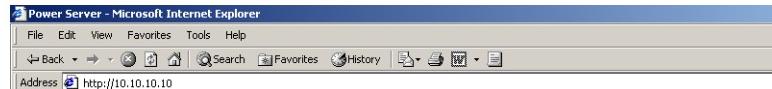

If the touchscreen displays a black screen, simply touch the screen to bring the display out of sleep mode.

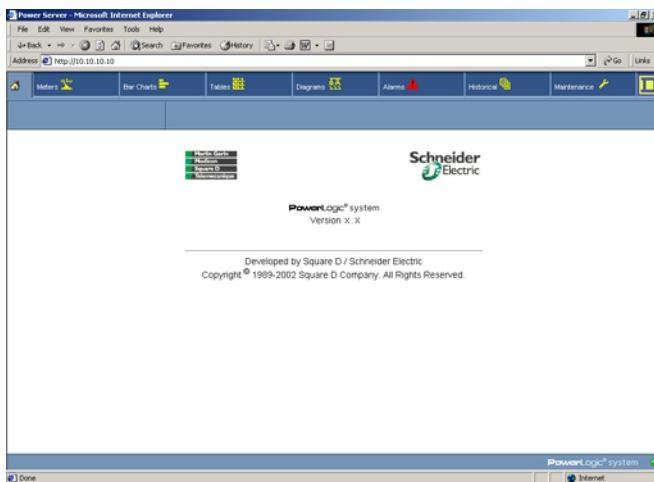

Connecting to the Power Server from a Remote PC

To connect to the Power Server from a remote PC, do the following:

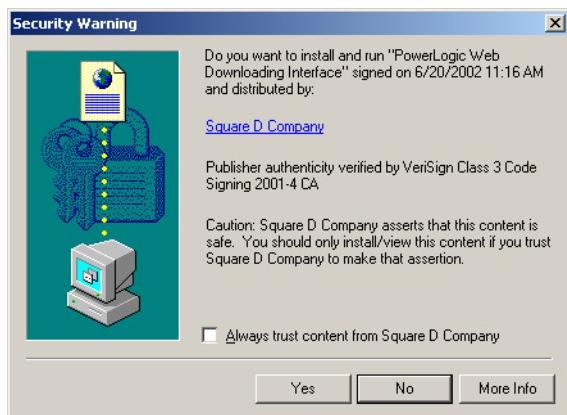

1. Start Internet Explorer (version 5.5 or higher).
2. In the Address field, type http:// followed by the IP Address for the Power Server.

3. Press Enter or click Go.
The Power Server splash screen displays briefly and then the home page displays.

NOTE: The first time you connect to the Power Server, you will see a prompt asking you to install the POWERLOGIC Web Downloading Interface. Click Yes to install the control. You are only required to do this once for each remote PC. You must be logged on to your PC as an Administrator to do this.

Adding the Power Server User Interface to Your Favorites in Internet Explorer

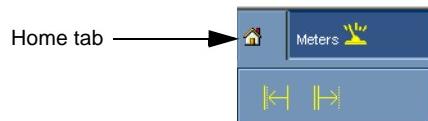

To avoid typing the IP address every time, you can add the Power Server home page to the Favorites folder. To do so, use one of the following methods:

- If after typing the IP address, the Power Server user interface displays the home page as shown in Figure 1 on page 2, click Favorites > Add to Favorites and name your Power Server as you choose.
- If a default page was set up earlier (see “Working with Lists on the PWRSRV750 Power Server User Interface” on page 37), do the following:
 - a. Restore defaults on the Default Page Preferences page and then refresh the browser.
 - b. Add the Power Server to your Favorites.
 - c. Set up your default page.

REFRESHING (RELOADING) THE POWER SERVER USER INTERFACE

To refresh (reload) the Power Server web pages, click the Home tab in the user interface toolbar. The Power Server interface refreshes and the home page shown in Figure 1 on page 2 displays.

NOTE: If you defined a default page in the Preferences dialog, that page will display instead of the home page shown in Figure 1 on page 2. (See “Working with Lists on the PWRSRV750 Power Server User Interface” on page 37 for instructions on defining a default home page.)

USING METER AND BAR CHART DISPLAYS

Viewing Meter Displays

To view meter displays, do the following:

1. Click the Meters tab (see Figure 2).
 2. Select a device from the tree list on the left side of the page.
 3. Select the desired quantity to view (amps, volts, etc.) from the Meters toolbar.
- The meters update at the sample rate displayed at the bottom of the Power Server Browser. (See "Changing the Sample Rate" on page 32 for instructions on modifying the sample rate.)
4. To view amps, volts, power, and power factor meters on the same display, click the All Charts button. Click the quantity names at the bottom of each meter to cycle through the various phases.

If you defined device groups during setup, the groups will appear in the tree.

Meter displays support color bands to indicate normal operating ranges. See "Configuring Meter and Bar Chart Displays" on page 7.

The maximum value shown in the meter can be adjusted by setting the ratings for each quantity of that device. See "Configuring Meter and Bar Chart Displays" on page 7.

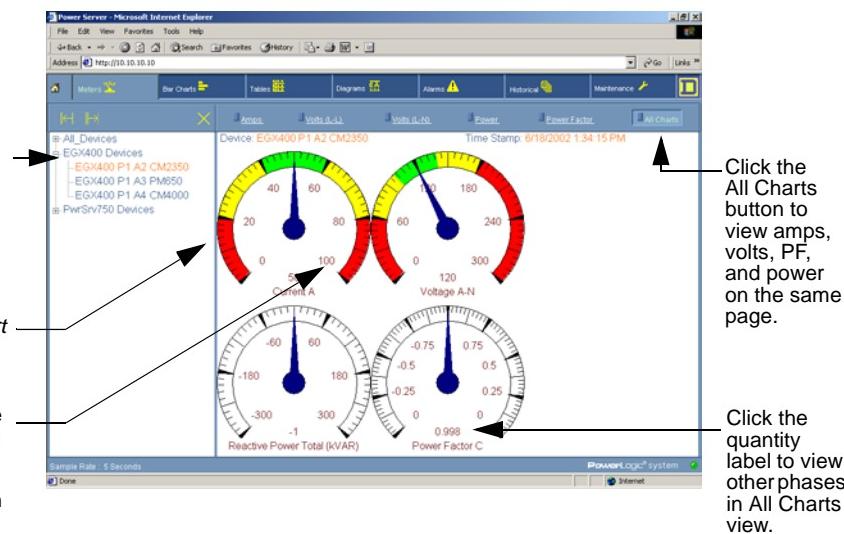

Figure 2: The Meters page in All Charts mode

Viewing Bar Charts

To view bar charts (Figure 3), do the following:

1. Click the Bar Charts tab.
2. Select a device from the list on the left side of the page.
3. Select the desired quantity to view (amps, volts, etc.).
The bar charts update at the sample rate displayed at the bottom of the Power Server Browser. (See “*Changing the Sample Rate*” on page 32 for instructions on changing the sample rate.)
4. To view amps, volts, power, and power factor charts on the same display, click the All Charts button. Scroll to view all charts.

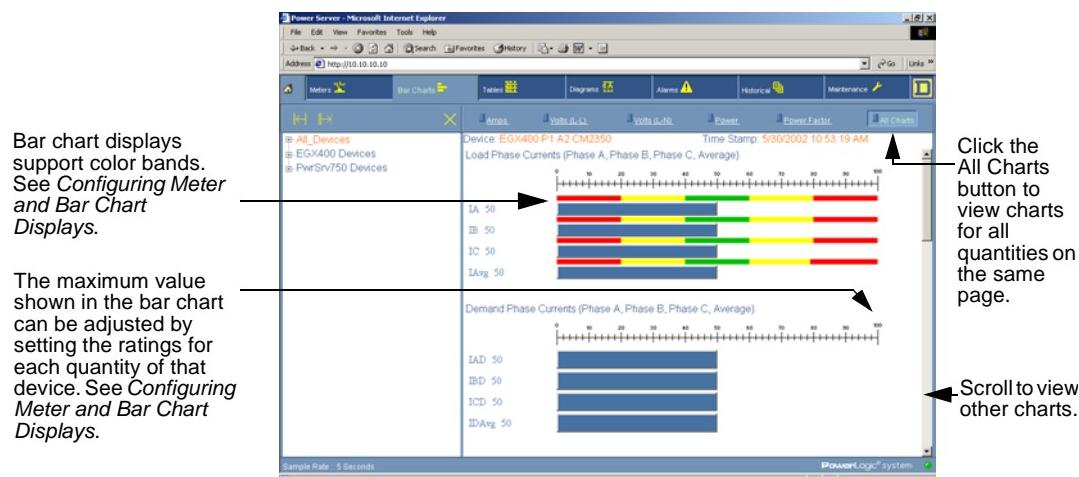

Figure 3: The Bar Charts page in All Charts mode

Configuring Meter and Bar Chart Displays

Both meter and bar chart displays support color bands to indicate normal operating ranges. These bands only appear if you configure them during the setup process. Find the index topic “Operating Range Indication” in SMS-3000 Help for instructions.

You can adjust the maximum value shown in a meter or bar chart display by setting the ratings for each quantity of that device. Find the index topic “Ratings” in SMS-3000 Help for instructions.

USING TABLES

Creating Quick Tables

The Power Server comes with a set of default tables for each device type supported by the Power Server. You can however quickly create simple custom tables. To do so, follow these steps:

NOTE: See “Prerequisite Information Covered in the Power Server Setup Guide” on page 1 if you are not yet familiar with operating the Power Server.

1. Use NetMeeting to access the Power Server.
2. Press **Ctrl-W** to display the Power Server desktop.
3. Put the Power Server in Setup Mode.
4. Redial the Power Server in NetMeeting to reconnect.
5. Press **Ctrl-W** to display the Power Server desktop.

-
6. Double-click the Powerlogic Server icon on the desktop.

7. Enter master for both username and password.
8. Double-click the Powerlogic System Setup icon on the desktop.

9. Enter master for both username and password.
 10. Click File > New > Quick Table.
 11. Create the quick table.
Select the Help > SMS-3000 Help > Custom Quantities and Tables > Adding a Custom (Quick) Table menu for instructions on creating quick tables.
 12. Put the Power Server back in Run Mode. This may take up to five minutes.
 13. Once the Power Server is started, restart Internet Explorer and browse the Power Server user interface.
 14. Click the Tables tab.
The new table should now display in the table list. See Figure 4 on page 9.
- NOTE: You can also create a custom table in the SMS Table Construction utility. To access it, click Start > Programs > Sms-3000 > SMS-3000 PL Table Utility. Refer to Help > SMS-3000 Help > Custom Quantities and Tables > Creating a Custom Table for instructions.*

Viewing Real-Time Tables

To view real-time tables, click the Tables tab. Two types of tables are available. *Single Device Tables* let you view data from a single device. *Multi-Device Tables* let you view summary data from multiple devices in the same table.

Viewing a Single Device Table

To view a single device table, do the following:

1. Click the Tables tab.
2. Click the Single Device Tables button to display the list of available single device tables (Figure 4).

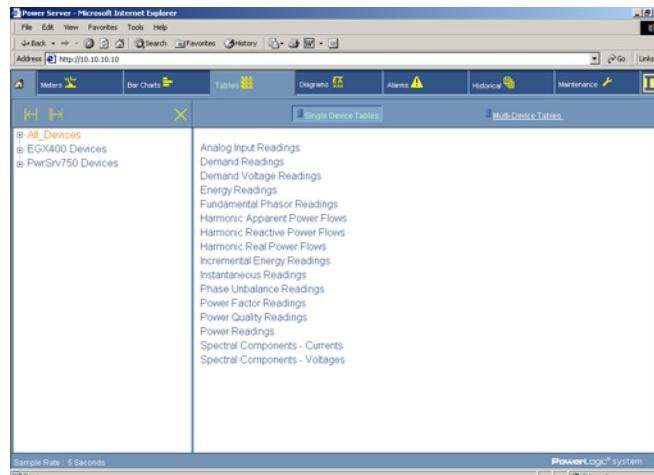

Figure 4: Single Device Tables selection list

3. In the device list on the left side of the page, select the desired device. The Power Server filters the tables list to show only tables that apply to the selected device.
4. Select the desired table to view. The table displays and the device tree view refreshes and filters the appropriate devices compatible with that table. The table data updates at the sample rate displayed at the bottom of the Power Server Browser. (See "Changing the Sample Rate" on page 32 for instructions on changing the sample rate.)
5. To view a different device using the same table, select a new device from the device list.
6. To view a different table with the same device, click the Single Devices Tables button to return to the Table Selection List.
7. To view a different table and a different device, click the Tables tab.

NOTE: You may first also select the table to be displayed, then select the applicable device from the list of devices. If you select the table first, the device tree view will refresh and filter the appropriate devices compatible with that table.

Viewing a Multiple Device Table

To view a multiple device table, do the following:

1. Click the Tables tab.
2. Click the Multi-Device Tables button to display a list of available tables.
3. Select the desired table to view.

The Power Server displays a dialog showing the list of devices that are compatible with the selected table (Figure 5).

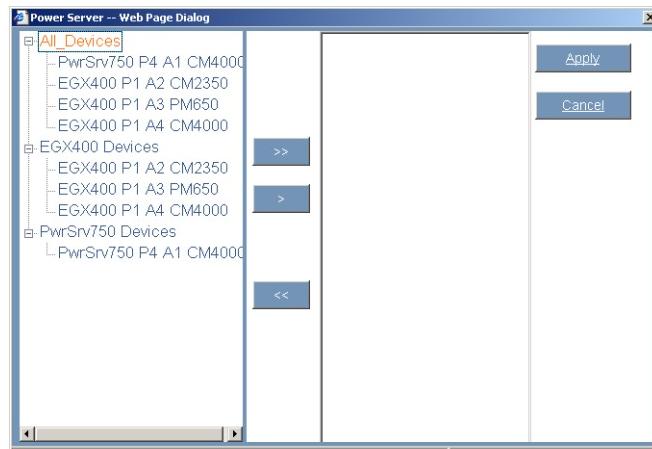

Figure 5: Multiple Device Tables selection list

4. Select the desired device(s) from the devices list by moving them to the list on the right side of the page. Choose devices by the following means:

- To select all devices, click 
- To select individual devices, select one device and click 
- To select all devices within a group, select the group name and click 
- To deselect all selected devices, click 

5. Click Apply to display the table.

The table updates at the sample rate displayed at the bottom of the Power Server Browser. (See “*Changing the Sample Rate*” on page 32 for instructions on changing the sample rate.)

6. To view a different table, click the Multi-Device Tables button to return to the Table Selection List.

VIEWING DOCUMENT FILES

The Power Server can store document files onboard for convenient reference. For example, using the optional touch screen display, you can easily access stored reference documents at the equipment.

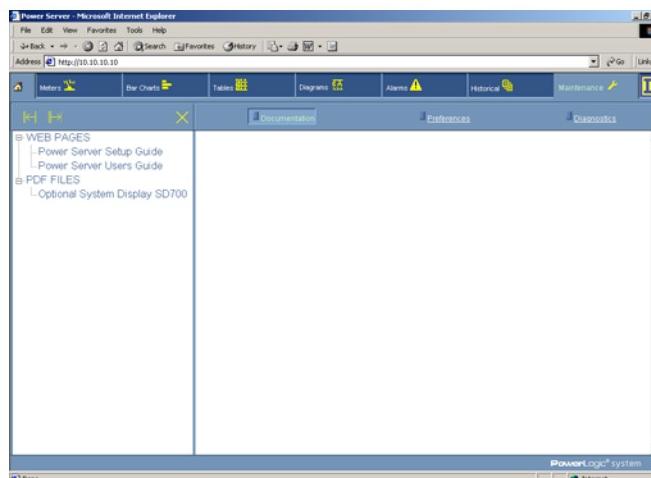

Documents can be stored in either HTML format or Adobe Acrobat PDF format. When you view a PDF document, the Power Server launches the Adobe Acrobat Reader plug-in within the Power Server Browser. If you view a PDF document from a remote browser that does not have Acrobat Reader installed, you can download it from the Adobe website, www.adobe.com.

An HTML version of this manual is loaded on the Power Server. Additional documents can be downloaded to the Power Server. For example, you might want to store power equipment drawings, or manuals for drives or other devices on the Power Server. Refer to the Power Server Setup Guide (63230-216-207) for instructions on downloading PDF or HTML document files to the Power Server.

To view files stored in the document library, do the following:

1. Click the Maintenance tab.
2. Click the Documentation button.

The Documentation page displays.

3. Choose from web pages or PDFs and then select the desired document to be displayed.

When viewing large PDF files, it may take several minutes for the document to open.

DATABASE MANAGEMENT

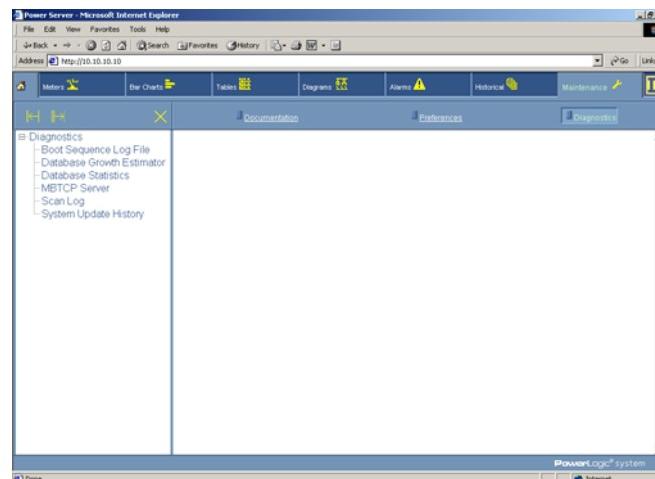

Two diagnostics pages are available to help you configure your Powerlogic System and manage the database of information that the Power Server collects. These pages are called the Database Growth Estimator page and the Database Statistics page.

Database Growth Estimator

The Power Server stores all logged data in a History database. This database is configured to hold a maximum amount of logged data for optimal Power Server performance. Once it reaches this maximum size, the Power Server deletes old data on a day-by-day basis to make space for new data.

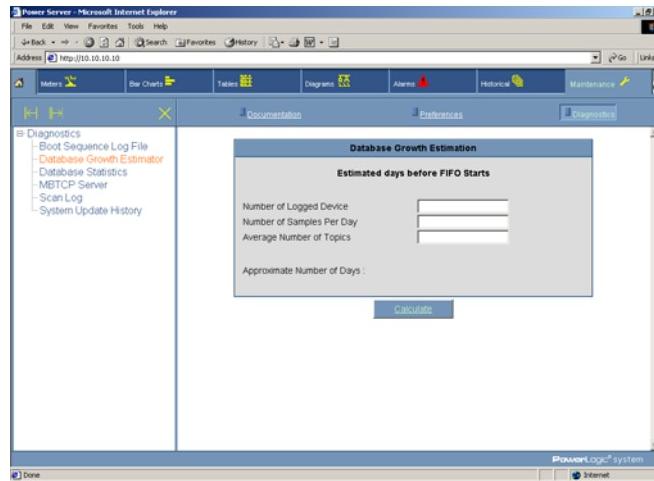

The Database Growth Estimator tool allows you to approximate how many days of data the database will hold before it deletes old data. To use this tool, do the following:

1. Click the Maintenance tab.
2. Click the Diagnostics button.
The Diagnostics page displays.

3. Select Database Growth Estimator from the list on the left side of the page.

The Database Growth Estimator page displays.

4. Do the following:

- In the Number of Logged Devices field, enter the number of devices you have set up in your system for logging.
- In the Number of Samples Per Day field, enter the total number of samples you have configured your Powerlogic System to acquire per day. For example, if your logging templates are configured to upload data every 15 minutes (default), then the number of Samples Per Day is:
$$(60 \text{ mins.} \div 15 \text{ mins.}) \text{ samples/hour} \times 24 \text{ hours/day} = 96 \text{ samples/day.}$$
- In the Average Number of Topics field, enter the average number of topics uploaded from the device through scheduled tasks or through log templates. For example, the predefined templates on the Power Server have an average of 25 topics.

5. Click the Calculate button.

The Approximate Number of Days displays indicating approximately how many days the Power Server database can hold data before deleting old data.

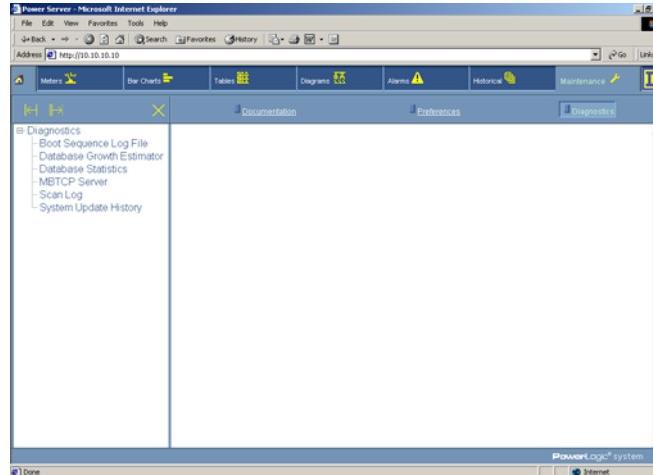

Database Statistics

The Database Statistics page allows you to view the current status of the Power Server databases. From this page, you can tell when the Historical data is approaching the 100% capacity when it will begin deleting old data.

To view the Database Statistics, do the following:

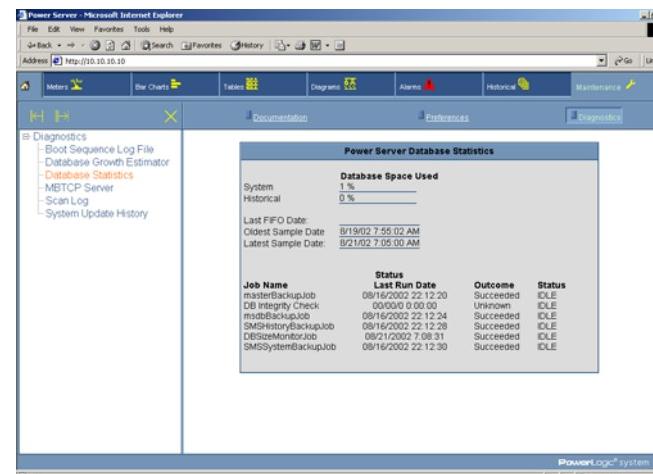

1. Click the Maintenance tab.
2. Click the Diagnostics button.

The Diagnostics page displays.

3. Select Database Statistics from the list on the left side of the page.

The Database Statistics page displays.

The following is an explanation of the information displayed:

- **Database Space Used:**
 - **System:** The System database contains all data for your PowerLogic system. If this database reaches 50% or higher, you will receive alarms.
 - **Historical:** The percentage displayed indicates the percentage of total capacity of the database used.

- **Last FIFO Date:**
 - When the History database reaches 100% capacity, the Power Server starts to run a “first in-first out” (FIFO) process. The Last FIFO Date displayed is the last date and time that the Power Server deleted one day’s worth of data.
- **Oldest Sample Date and Latest Sample Date:**
 - These two dates represent the oldest and the most recent device data samples logged into the History database. When the database has reached 100% capacity and the Power Server is deleting old data, these two dates get updated. If the database has not yet reached 100% capacity, only the Latest Sample Date gets updated.
- **Status**
 - Several tasks run to manage the Power Server databases. The status of these various tasks display the last time the jobs ran, the results of the execution, and the current execution status.

TROUBLESHOOTING

The Power Server provides diagnostic data that can be useful in troubleshooting.

- A record of the last reboot date and time
- Gateway communications error counters
- A log of system alarms
- A list of system updates

To view the diagnostic data, do the following:

1. Click the Maintenance tab.
2. Click the Diagnostics button.
3. Select the desired diagnostic page from the selection tree.

Determining the Software Version Using the About Box

To determine the version of the Power Server interface software, view the Power Server home page or view the About box. To display the About box, click the icon in the upper right of the Power Server interface (Figure 6).

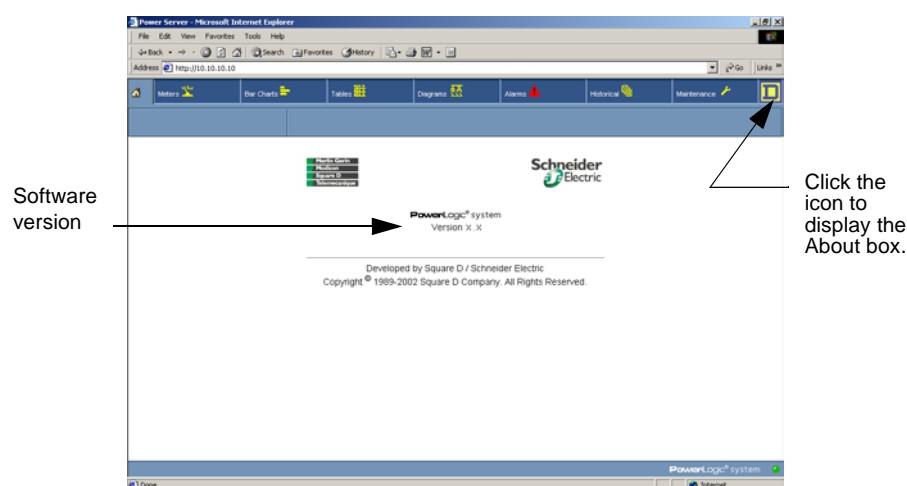

Figure 6: The Power Server home page

CHAPTER 3—POWER SERVER MODEL PWRSRV750 OPERATION

The Power Server Model PWRSRV750 has all the capabilities of the Power Server Model PWRSRV710 as well as additional functionality. This chapter covers these additional capabilities of the PWRSRV750.

USING DIAGRAMS

Creating Diagrams

GFX-1000 is a color graphics program that lets you create diagrams for viewing real-time data from your Power Server PWRSRV750 user interface. You can quickly create simple custom diagrams. To do so, follow these steps:

NOTE: See “Prerequisite Information Covered in the Power Server Setup Guide” on page 1 if you are not yet familiar with operating the Power Server.

1. Use NetMeeting to access the Power Server.
2. Press **Ctrl-W** to display the Power Server desktop.
3. Put the Power Server in Setup Mode.
4. Redial the Power Server in NetMeeting to reconnect.
5. Press **Ctrl-W** to display the Power Server desktop.
6. Double-click the Powerlogic Server icon on the desktop.

7. Enter master for both username and password.
8. Double-click the Powerlogic System Setup icon on the desktop.

9. Enter master for both username and password.
 10. Click File > New > Diagram.
 11. Create the diagram.
- See Help > SMS-3000 Help > GFX-1000 for instructions on how to create diagrams. In particular, refer to “Types of GFX Objects” under this heading for guidelines on the types of diagrams you can create.

NOTE: If you prefer to use one of your own backgrounds in your diagram, use the File Transfer procedure in NetMeeting to transfer the custom background. Copy the background from the C:\NetMeeting Received files directory to the C:\SMS-3000\Drawings\Backgrounds directory. See the appendix on “Uploading and Deleting Files on the Power Server” in the Power Server Setup Guide 63230-216-207.

12. Put the Power Server back in Run Mode. This may take up to five minutes.
13. Once the Power Server is started, restart Internet Explorer and browse the Power Server user interface.

NOTE: It is necessary to restart Internet Explorer to see most changes to a diagram take effect.

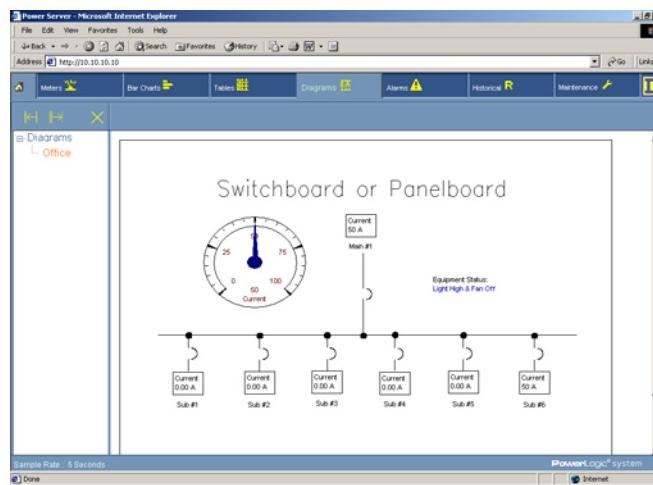

14. Click the Diagrams tab.

The new diagram should display in the tree list on the left side of the window. Refer to “*Changing the Sample Rate*” on page 32 for setting the sample rate that data updates in diagrams. The default sample rate is ten seconds.

Viewing Diagrams

To view diagrams, do the following:

1. Click the Diagrams tab.
2. Select the diagram from the list on the left side of the page.
The diagram displays.

USING ALARMS

Configuring Alarms

Using the PowerLogic System Setup application, you can configure analog, digital, or onboard alarms that will be annunciated in the Power Server PWRSRV750 user interface. The following information is available in online Help:

- For an overview, see Help > SMS-3000 Help > Quick Starts > Quick Start: Functions and Alarms.
- For configuring onboard alarms, see Help > SMS-3000 Help > Working with Functions and Alarms > Setting Up On-Board Alarms.
- For digital alarms, see Help > SMS-3000 Help > Setting Up PC-Based Functions and Alarms.

Viewing Alarm Information

By default, the alarm icon is yellow and the alarm list is empty. When an alarm becomes active (alarm pickup state), the alarm icon (Figure 7) starts flashing and a new entry is added to the active alarm list and the alarm log list.

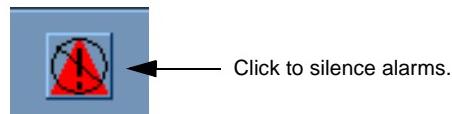

This icon on the alarms tab alternately flashes red and yellow to indicate an active alarm.

Figure 7: The Active Alarm indicator

An active alarm stays in the active alarm list as long as it is in a pickup state. When it is no longer active (dropout state), it is deleted from the active alarm list and a dropout alarm is added to the alarm log. The alarm icon continues to flash to signal that alarm activity has occurred.

Silencing Alarms

You can “silence” alarms on your Power Server user interface by stopping the alarm icon from flashing red. To silence an alarm, click the Silence Alarms icon.

If a new alarm picks up, then the icon will start flashing again. If the Alarm icon is flashing and no entries are in the Active Alarms list, it means that all the active alarms have already dropped out. Click the Alarm Log to view those alarms. See “*Retrieving Information from the Alarm Log*” on page 22.

NOTE: In case of bad communications or setup changes on devices, some alarms may display in the active state even though they have dropped out already. In this case, click the Home tab to refresh the user interface. If these alarms still appear in the active alarm list, connect to the Power Server with NetMeeting, click the Power Server application icon in the taskbar and restart the Power Server.

Viewing Active Alarms

To view active alarms, click the Alarms tab and the Active Alarms page displays. See “*Working with Trees on the Power Server User Interface*” on page 36 for information on resizing, sorting, and getting details on entries.

The screenshot shows a Microsoft Internet Explorer window titled "Power Server - Microsoft Internet Explorer". The address bar shows "http://10.10.10.10". The main content area displays a table titled "Active Alarms" with the following data:

Time Of Occurrence	Device	Function	State
6/4/2002 7:21:32 AM	Spiffy	DB Sync	
6/4/2002 7:21:40 AM	Micrologic H	Trip Unit Door Status (PM)	Open
6/4/2002 7:21:40 AM	CM2000 A10	Current A	Feeder dead
6/4/2002 7:21:40 AM	CM4000	Current A	Freezing
6/4/2002 7:21:40 AM	Micrologic P	Long Delay Pickup	In Progress

Below the table, a status bar says "Sample Rate : 5 Seconds".

Viewing Detailed Information on an Alarm

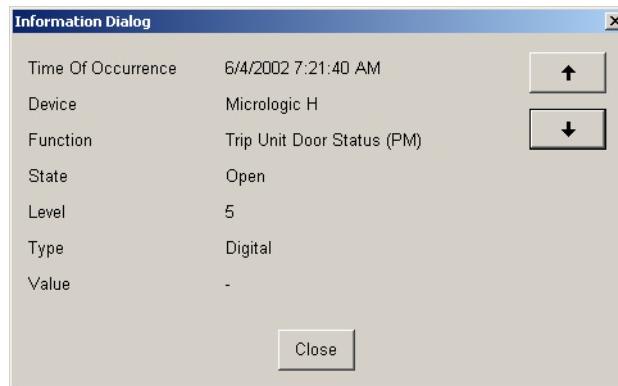

You can view detailed information on an active alarm as well as those in the alarm log. To do so, click the entry in the list for the alarm.

Click an entry to view details.

The screenshot shows the same Microsoft Internet Explorer window as the previous one, but with a cursor hovering over the first row of the "Active Alarms" table. The table data is identical to the previous screenshot.

The Information Dialog displays.

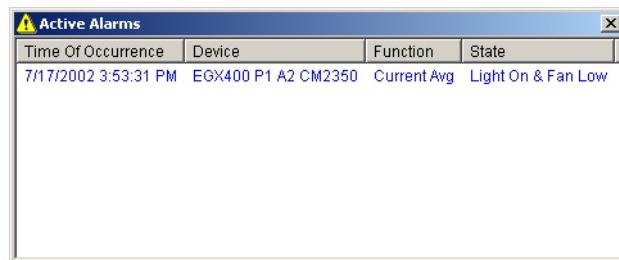

You can click the up and down arrows to scroll through information on alarms on the page you are viewing.

NOTE: You can press Alt+N to go to the next alarm in the list. Press Alt+P to go to the previous.

Popup Alarms

If you have set alarms to display as a popup alarm, they display in the following dialog on top of the user interface:

Refer to "How Alarms Are Indicated—Audible, Popup View, or Both" on page 35 for details on selecting this method of alarm indication.

If you resize or move the popup dialog or resize the columns, the user interface remembers those settings the next time you browse the Power Server. If you close the popup dialog, it automatically pops back up when a new alarm becomes active.

Retrieving Information from the Alarm Log

To view a log of alarms, follow these steps:

1. Click the Alarms tab.
The Alarms page displays.
2. Click the Alarm Log button.
The Alarm Log displays.

Time Of Occurrence	Device	Function	State
5/29/02 4:54:58 PM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/29/02 11:46:25 AM	EGX400 P1 A2 CM2	Over Current Phase A	Dropout - OVER
5/29/02 10:46:49 AM	EGX400 P1 A2 CM2	Over Current Phase A	Pickup - OVER
5/29/02 10:40:41 AM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Low
5/29/02 9:33:26 AM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/29/02 8:50:23 AM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/29/02 8:45:41 AM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/29/02 8:28:53 AM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/28/02 4:57:04 PM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/28/02 4:50:41 PM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/28/02 4:50:09 PM	EGX400 P1 A2 CM2	Over Current Phase A	Dropout - OVER
5/28/02 4:50:07 PM	EGX400 P1 A2 CM2	Over Current Phase A	Pickup - OVER
5/28/02 4:50:07 PM	EGX400 P1 A2 CM2	Under Current Phase A	Dropout - UNDER
5/28/02 4:39:15 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:39:11 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:39:05 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:38:59 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:38:55 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:38:51 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:38:35 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:38:15 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:38:11 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:38:01 PM	EGX400 P1 A2 CM2	Current Avg	Light Low & Fan Off
5/28/02 4:37:49 PM	EGX400 P1 A2 CM2	Under Current Phase A	Pickup - UNDER

You have the following choices for how to view the alarm log:

- Click All_Devices and then ALL ALARMS to view all alarms for all devices in the Power Server system.
- Click a group and then ALL ALARMS to view all alarms for a particular group of devices.
- Click All_Devices or the group name that includes the device and then click the device itself to view all alarms for that device only.

NOTE: If a device in Meters, Bar Charts, Tables, or Waveforms was selected prior to displaying the alarm log, then this device will be selected by default in the Alarm Log view. Click All Alarms to display all the alarms.

The maximum number of entries displayed in the alarm log depends on the alarm configuration. See "Number of Alarm Records Displayed" on page 36.

You can sort on any column, including the waveform column, which is the unlabeled column to the left. To resize columns, refer to "Resizing Columns in the Active Alarm Popup Window" on page 37.

The Alarm Log Refresh Icon

When a new entry is added to the Alarm Log, the Alarm Log Refresh icon displays. It will display until you click the Alarm Log button.

When clicking the Alarm Log button, the number of records set in the preferences is retrieved from the Power Server. See "Number of Alarm Records Displayed" on page 36. When switching between devices in the tree

view, the alarms are not updated. Watch for the refresh icon. The refresh icon will display anytime new entries have been added in the alarm log on the Power Server.

Viewing Waveform Information From the Alarm Log

If you configured a device to trigger a waveform on a particular alarm and also assigned a PC task in the Power Server Setup to retrieve that waveform, then a waveform icon appears next to that alarm once the waveform has been retrieved from the device. All alarms within two seconds of the time of the occurrence for a particular device have the waveform icon associated with them.

Depending on the size of the waveform, you may see an alarm entry in the alarm log with no icon associated. The Power Server waits to have the waveform uploaded from the device before displaying the waveform icon link.

For the icon feature to work properly, ensure that the Power Server has uploaded all the latest waveforms from each device. See "Using Waveforms" on page 26.

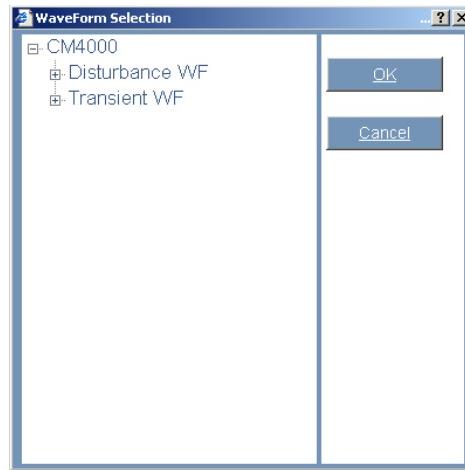

To view waveform information from the Alarm Log, follow these steps:

1. Click the Alarms tab.
The Active Alarms page displays.
2. Click the Alarm Log button.
The Alarm Log page displays.

Time Of Occurrence	Device	Function	State
5/28/02 4:34:58 PM	EGX400 P1 A3 CM2	Current Avg	Light High & Fan Off
5/28/02 10:46:25 AM	EGX400 P1 A2 CM2	Over Current Phase A	Dropout - OVER

5/28/02 8:38:27 AM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/28/02 8:39:53 AM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/28/02 8:40:00 AM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/28/02 8:40:41 AM	EGX400 P1 A2 CM2	Current Avg	Light High & Fan Off
5/28/02 4:50:09 PM	EGX400 P1 A2 CM2	Over Current Phase A	Dropout - OVER
5/28/02 4:50:07 PM	EGX400 P1 A2 CM2	Over Current Phase A	Pickup - OVER
5/28/02 4:50:07 PM	EGX400 P1 A2 CM2	Under Current Phase A	Dropout - UNDER
5/28/02 4:39:15 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:39:11 PM	EGX400 P1 A2 CM2	Current Avg	Light Low & Fan Off
5/28/02 4:39:05 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:39:01 PM	EGX400 P1 A2 CM2	Current Avg	Light Low & Fan Off
5/28/02 4:38:55 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:38:45 PM	EGX400 P1 A2 CM2	Current Avg	Light Low & Fan Off
5/28/02 4:38:35 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:38:25 PM	EGX400 P1 A2 CM2	Current Avg	Light Low & Fan Off
5/28/02 4:38:11 PM	EGX400 P1 A2 CM2	Current Avg	Light & Fan Off
5/28/02 4:38:01 PM	EGX400 P1 A2 CM2	Current Avg	Light Low & Fan Off
5/28/02 4:37:49 PM	EGX400 P1 A2 CM2	Under Current Phase A	Pickup - UNDER

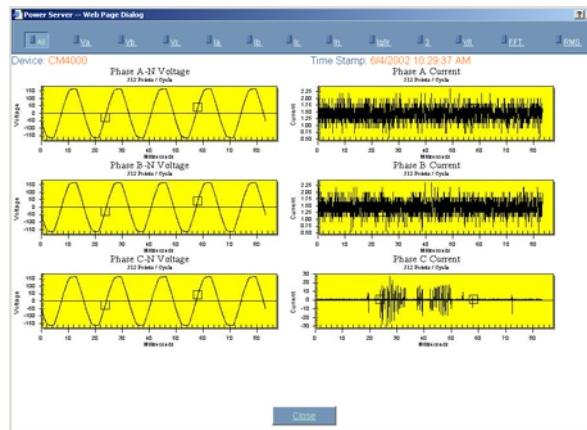

3. Click the waveform icon.

- If only one waveform is available for that alarm, then that waveform displays.
- If multiple waveforms are available for the same alarm, the Waveform Selection Dialog displays.

Click the type of waveform you want to view and make your selection from the list. Click OK.

The waveform page displays.

4. You can click buttons on the waveform dialog toolbar to view the following information:

- All—Click here to view graphs (all three voltage phases and all three current phases) of the waveform.
- V_A—Click here to view phase A voltage.
- V_B—Click here to view phase B voltage.
- V_C—Click here to view phase C voltage.
- I_A—Click here to view phase A current.
- I_B—Click here to view phase B current.
- I_C—Click here to view phase C current.
- I_N—Click here to view Neutral current.
- Ig/Ir—Click here to view ground current. If the device is a CM2000, click here to view residual current.

- 3—Click here to view two graphs—one with all three voltage phases overlapped and the other with all three current phases overlapped.
- V/I—Click here to view each phase, both voltage and current, within a single graph. You see phase A voltage and current in one graph, phase B voltage and current in another, and phase C voltage and current in a third.
- FFT—Click here to view the FFT cycle range.
- RMS—Click here to view the display as an RMS plot.

NOTE: If you select a type of graph that does not apply for a waveform of that particular device, the "All" view displays instead.

Viewing PWRSRV750 System Information from the Alarm Log

The Power Server uses a scan utility to monitor itself for proper configuration. It may trigger any of the following alarms if the utility detects certain criteria:

- Reports Alarm
- Waveforms Alarm
- Diagrams Alarm
- Disk Alarm
- Memory Alarm

These alarms will appear in the Alarm Log as "Scan Utility Device" entries. A wrench icon displays beside them. Click the wrench icon to access the log of alarms corresponding to these functions such as Reports, Waveforms, and Disk Space.

Click the wrench icon

to view scan utility-based alarm information.

Time Of Occurrence	Device	Function	State
7/22/02 10:06:01 AM	Scan Utility Device	Reports Alarm	System Action Taken
7/22/02 9:04:19,460...	Type H	Battery Low (PM)	Dropout - SINGLE
7/22/02 9:04:00,540...	Type H	Battery Low (PM)	Pickup - SINGLE
7/22/02 8:06:03 AM	Scan Utility Device	Reports Alarm	System Action Taken
7/22/02 2:12:26,900...	Type H	Battery Low (PM)	Dropout - SINGLE
7/22/02 2:12:08 AM	Type H	Battery Low (PM)	Pickup - SINGLE
7/22/02 1:12:52 AM	Type H	Current Unbalance ...	Pickup - Type: 11

7/20/02 9:50:11 PM	Type H	Current Unbalance ...	Pickup - Type: 11
7/20/02 9:50:04 PM	Type H	Current Unbalance ...	Dropout - Type: 11
7/20/02 9:34:59 PM	Type H	Current Unbalance ...	Pickup - Type: 11
7/20/02 9:34:54 PM	Type H	Current Unbalance ...	Dropout - Type: 11
7/20/02 8:55:23 PM	Type H	Current Unbalance ...	Pickup - Type: 11
7/20/02 8:54:20 PM	Type H	Current Unbalance ...	Dropout - Type: 11
7/20/02 6:53:54 PM	Type H	Current Unbalance ...	Pickup - Type: 11

To view the complete system log, do the following:

1. Click the Maintenance tab.
2. Click the Diagnostics button.

3. Click the Scan Log.
- The Scan Log displays.

Time Stamp	Scan Description
9/6/02 10:57:54 AM	Folder "C\SMS-3000\Reports" Maximum Number of Files Exceeded. Current Value: 1102 Allowable Value: 1000 Moving 102 File(s) to "C\Backup\Reports"
9/6/02 8:57:41 AM	Folder "C\SMS-3000\Reports" Maximum Number of File Exceeded. Current Value: 1084 Allowable Value: 1000 Moving 84 File(s) to "C\Backup\Reports"
9/6/02 6:57:36 AM	Folder "C\SMS-3000\Reports" Maximum Number of File Exceeded. Current Value: 1084 Allowable Value: 1000 Moving 84 File(s) to "C\Backup\Reports"

USING WAVEFORMS

Configuring Waveforms

You can view waveforms in the Power Server user interface if they are uploaded on the Power Server. To configure waveforms to upload to the Power Server, refer to the Onboard Files and Onboard Alarms sections for the appropriate device types in Help > SMS-3000 Help > Setting Up Devices.

We recommend setting up a scheduled task to upload onboard waveforms from each device. For example, you can schedule the task to run every night at 11:00 pm. Refer to Help > SMS-3000 Help > Setting Up Devices > Working with Functions and Alarms > Using Tasks to Automate Processes and see the topics “Adding an Onboard Data Log/Waveform Task” and “Creating a New Reference Time.”

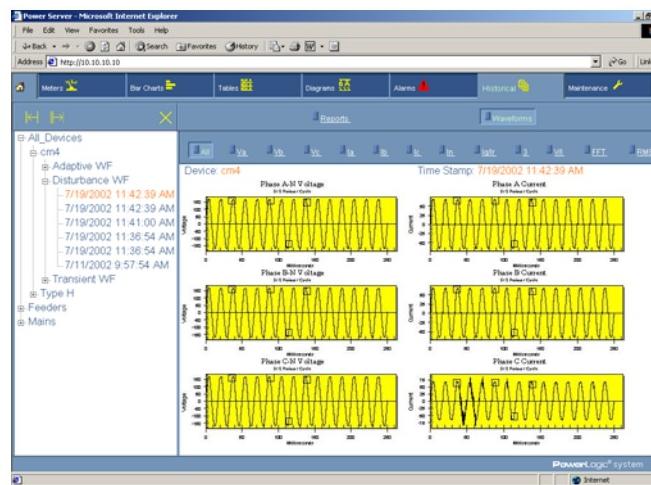

Viewing Waveform Information Only

To view waveform information only, do the following:

1. Click the Historical tab.
- The Historical page displays.
2. Click the Waveforms button.
- The Waveforms page displays.

3. Choose a waveform for a particular device. Do the following:
 - a. Click All_Devices or the group name that includes the device.
 - b. Click the device that has information you want to view.
 - c. Click the type of waveform you want to view.
 - d. Select the appropriate time stamp.

The waveform historical page for your selection displays.

NOTE: If you selected a device in Meters, Bar Charts, Tables, or Alarm Log, this device is selected by default when displaying waveform information.

Zooming for a Closer View of Waveform Information

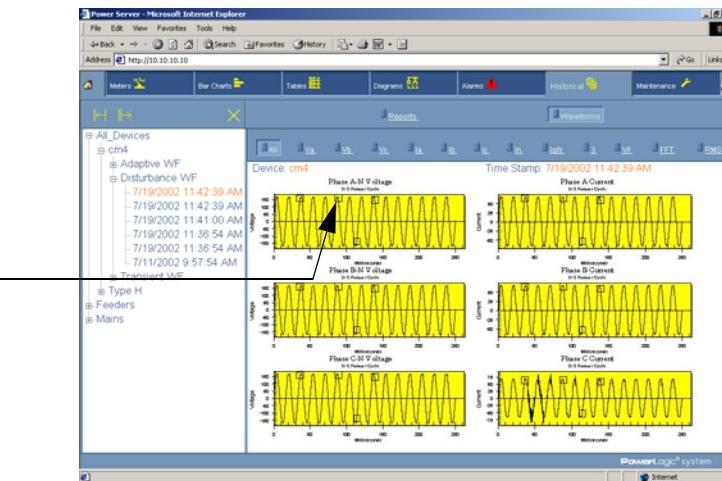

To zoom in for a closer view of transient or other waveform information, click the graph of the waveform.

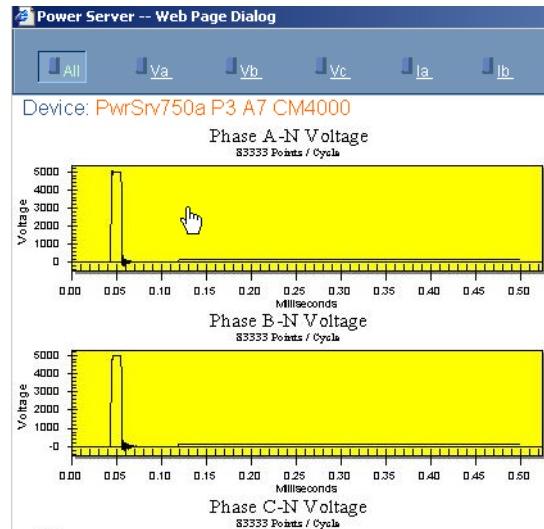

Zooming for a Closer View of Waveforms with Associated Transients

If you have a CM4000T in your system, you can click the square after zooming in on a specific phase to view the transient waveform associated with that waveform.

If you have a CM4000T in your system, you can click the square after zooming in on a specific phase to view the transient waveform associated with that waveform.

The transient waveform capture displays.

- To zoom in further, continue clicking the area you want to magnify.
- To zoom out, click one of the tabs in the button bar.

USING REPORTS

Creating Reports

You can use Information Manager, a module that is available in the system setup utility, to create historical reports on the Power Server. Follow these steps:

NOTE: See “Prerequisite Information Covered in the Power Server Setup Guide” on page 1 if you are not yet familiar with operating the Power Server.

1. Use NetMeeting to access the Power Server.
2. Press **Ctrl-W** to display the Power Server desktop.
3. Put the Power Server in Setup Mode.
4. Redial the Power Server in NetMeeting to reconnect.
5. Press **Ctrl-W** to display the Power Server desktop.
6. Click the POWERLOGIC Reports Setup icon to start SMS Information Manager.

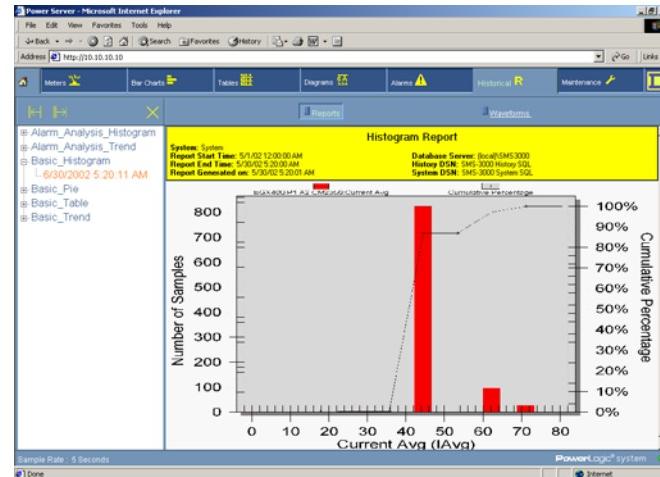

7. Click File > New to launch the PowerLogic Reports wizard.
Refer to online Help for instructions on using the report creation wizards.
From the SMS Information Manager application menu, click Help > Contents and find the topic for the type of report you want to create.
8. Put the Power Server back in Run Mode. This may take up to five minutes.
9. Once the Power Server has restarted, click the Home tab on the Power Server user interface to refresh and make the report available for viewing when you click the Reports button on the Historical page. It should display in the tree list on the left side of the window.

Viewing Reports

To view reports, do the following:

1. Click the Historical tab.
2. Click the Reports button.
3. Select the desired report to be displayed. To do so, click the report name you want to view and then click the appropriate time stamp.

The report displays.

If a scheduled report is configured to overwrite, then only one date and time is listed under the report name. Each report generated overwrites the previous one and the date and time is updated. If a scheduled report is not set to be overwritten, a list of reports with dates and times displays under each report name. Refer to online help in SMS Information Manager for the particular type of report for information on configuring the overwrite setting.

NOTE: If an “overwrite” report is in the process of being updated, you will not be able to view it until the update process is complete. If you try to access it, you get an error message.

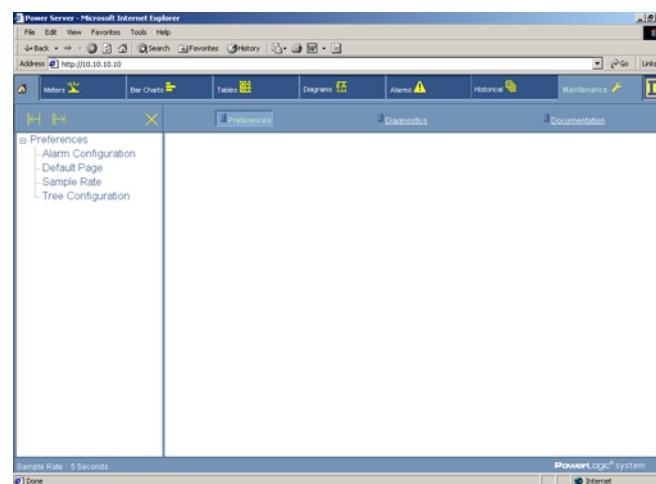

NOTE: In Setup mode, existing scheduled reports are automatically disabled. They are enabled again when you go back into Run mode.

CHAPTER 4—SETTING USER PREFERENCES

The Power Server provides several user-configurable preferences that you can set on the Preferences page. This chapter covers procedures for setting these preferences. It also covers other adjustments you can make for viewing information on screens. Unless otherwise noted, information in this chapter applies to both Power Server models. For procedures that apply to Model PWRSRV750 specifically, see “*Working with Lists on the PWRSRV750 Power Server User Interface*” on page 37.

To access the Preferences page, click the Maintenance tab, then the Preferences button.

The Preferences page displays.

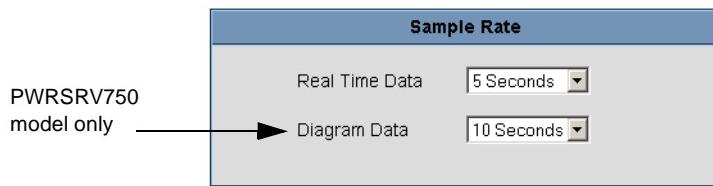

NOTE: Preferences are stored for each client (remote PC or touchscreen display). In other words, changes you make to the user preferences on a remote PC affect only that PC. In each category, you can click Restore Defaults if you want to revert to default settings.

CHANGING THE SAMPLE RATE

By default, the Power Server samples data and updates real-time displays once every five seconds and data in diagrams once every ten seconds. The current sample rate is displayed in the lower left corner of the Power Server Browser's window.

To change the sample rate, do the following:

1. Click the Maintenance tab.
2. Click the Preferences button.
The Power Server displays the Preferences page.
3. Select Sample Rate from the list on the left side of the page.
The Sample Rate setup displays.

4. Select desired sample rates for real time data and diagram data [750].
5. Click the Home button to save changes.
The new sample rate should be displayed in the lower left corner of the Power Server Browser.

CHANGING THE DEFAULT PAGE

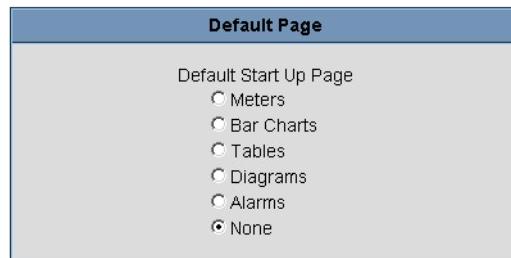

When you connect to the Power Server by entering its IP address in Internet Explorer, the Power Server home page displays (see Figure 1 on page 2). The Default Page preference lets you configure the Power Server to automatically display any of the following pages:

- Meters
- Bar Charts
- Tables
- Diagrams (PWRSRV750 model only)
- Alarms (PWRSRV750 model only)

To change the default page, do the following:

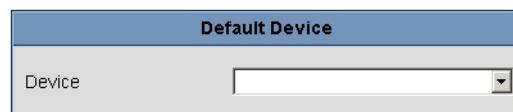

1. Click the Maintenance tab.
2. Click the Preferences button.
The Power Server displays the Preferences page.

3. Select Default Page from the tree on the left.
The Default Page Preferences page displays.

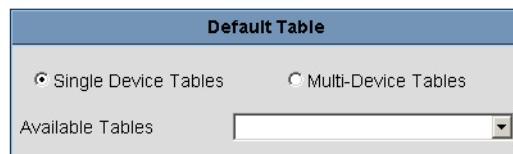

[Restore Defaults](#)

4. From the Default Page Preferences page, make your selection.
 - If you select Meters or Bar Charts, the Default Device dialog displays.

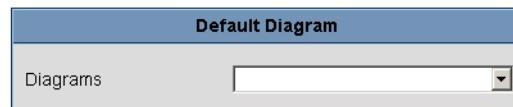

If you do not select a device, the default page is Meters or Bar Charts with no device selected. If you select a device, the meters or bar charts start sampling automatically when you display the default page.

- If you select Tables, the Default Device and Default Table dialogs both display. For Default Tables, options are Single Device Tables or Multi-Device Tables.

If you do not select a device, the default page is Tables with no device selected. If you select a device and compatible table, the tables start sampling automatically when you display the default page.

- If you select Diagrams (PWRSRV750 model only), the Default Diagram dialog displays.

If you do not select a diagram, the default page is Diagrams with no diagram selected. If you select a diagram, that diagram starts sampling automatically when you display the default page.

- No additional options display if you select Alarms (PWRSRV750 model only).

5. Make selections as needed from pulldown menus.
6. Click the Home tab to test your default configuration. The Power Server should display the Power Server splash screen, then your chosen default display. If you selected a Multi-Device table as the default, you'll first have to select the desired devices from a device selection dialog box.

MAXIMIZING SCREEN SPACE FOR VIEWING DATA

The Tree Configuration preference lets you automatically collapse selection trees to maximize the screen space available for viewing data. You make this setting from the Tree Configuration page (Figure 8).

When the “Collapse Tree On Selection in” box is *checked*, the Power Server collapses the selection trees after you've chosen what you want to view.

When the box is *not checked*, the trees remain open. Figure 9 illustrates a table in collapsed tree view. To expand a collapsed tree, click the arrow also illustrated in Figure 9 on page 35.

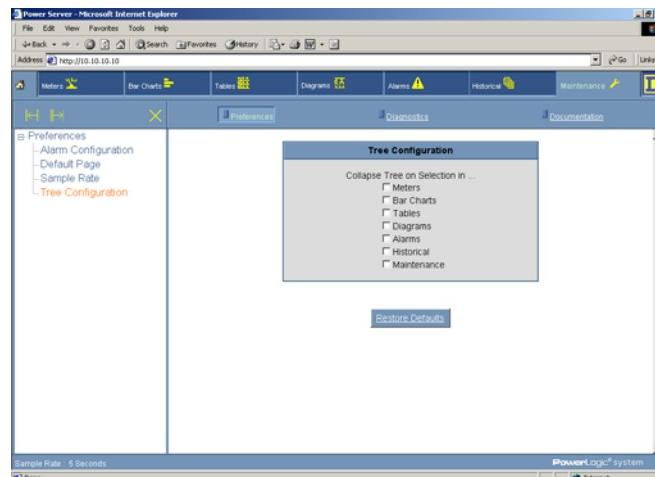

Figure 8: The Tree Configuration page

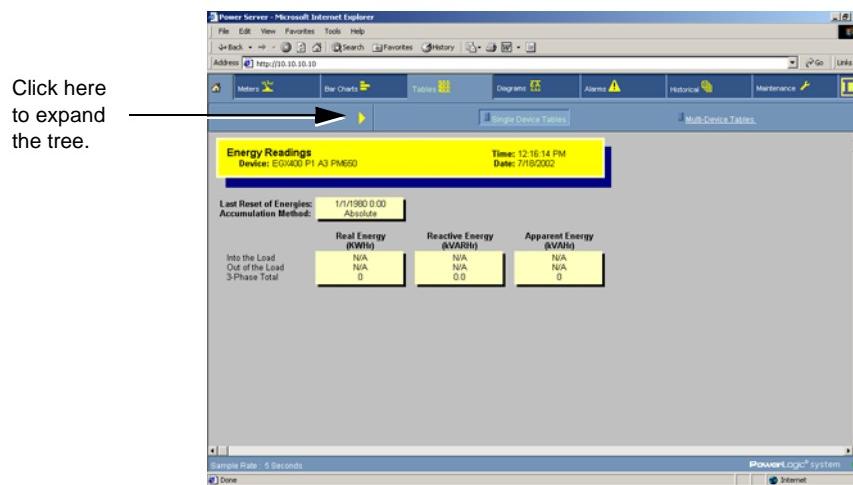

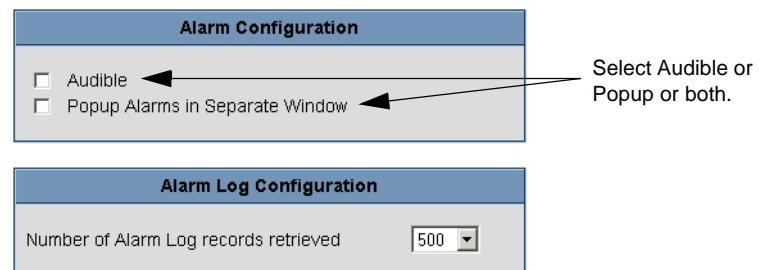

Figure 9: Table in a Collapsed Tree View

HOW ALARMS ARE INDICATED—AUDIBLE, POPUP VIEW, OR BOTH

You can set alarms to make an audible sound when entering a pickup state. You can also have alarms display in a popup dialog that is visible anywhere you browse in the user interface.

To select the method that alarms are indicated, do the following:

1. Click the Maintenance tab.
2. Click the Preferences button.
The Power Server displays the Preferences page.
3. Select Alarm Configuration from the list on the left side of the page.
The Alarm Configuration dialog displays.

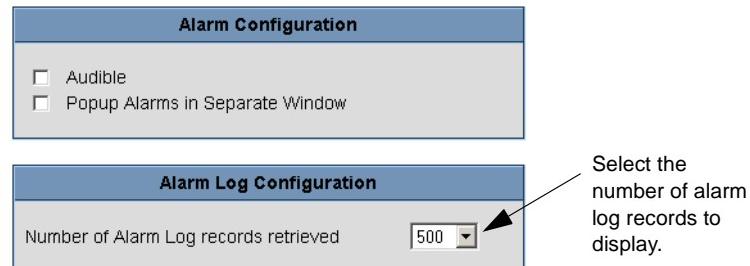

4. Select Audible or Popup or both.
5. Click the Home tab to refresh and save your settings.

NUMBER OF ALARM RECORDS DISPLAYED

You can choose how many alarm records to display when you view the Alarm Log. To do so, follow these steps:

1. Click the Maintenance tab.
2. Click the Preferences button.
The Power Server displays the Preferences page.
3. Select Alarm Configuration from the list on the left side of the page.
The Alarm Configuration dialog displays.

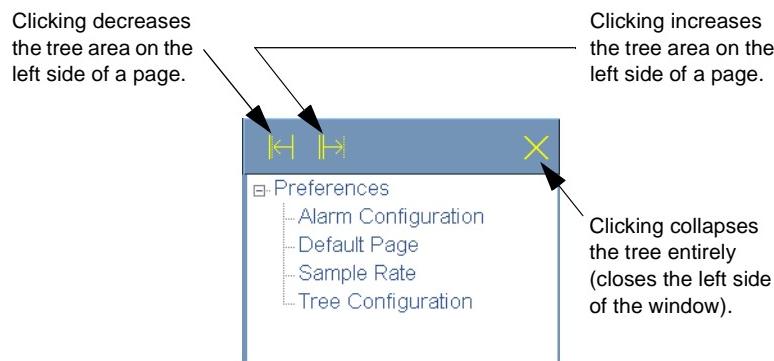

4. Under Alarm Log Configuration, select the number of alarm log records to retrieve from the Power Server.
5. Click the Home tab to refresh and save your settings.

WORKING WITH TREES ON THE POWER SERVER USER INTERFACE

This section covers basic procedures for using trees on the Power Server. Unless otherwise noted, information applies to both models. For additional procedures that apply to Model PWRSRV750 specifically, see "Working with Lists on the PWRSRV750 Power Server User Interface" on page 37.

Resizing The Tree Portion of a Window (Left Side of the Page)

You can resize the tree portion of a window by clicking the right or left arrows on the left side of the page. You can also collapse the tree entirely (close the left side of the window).

When you refresh the browser or close Internet Explorer, these settings are retained for the next time you browse the Power Server.

To restore the tree widths to the default setting, click the Restore Defaults button on the Tree Configuration page under the Preferences button.

WORKING WITH LISTS ON THE PWRSRV750 POWER SERVER USER INTERFACE

Resizing Columns in the Active Alarm Popup Window

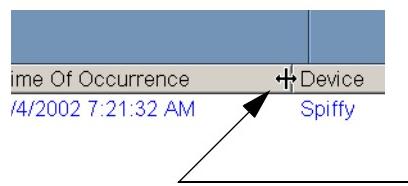

This section covers procedures for using lists on the Power Server Model PWRSRV750.

You can drag the borders of columns in the popup window to resize them. You can resize the columns to fit the longest entry for that particular column. To do so, follow these steps:

1. Point the mouse to the edge of the column so that the resizing tool displays.

2. Double-click.

The column will automatically resize to the longest entry in the column.

Drag the borders of columns to resize them. Double-clicking at the edge of a column resizes to fit the longest entry in that column.

Sorting By Columns

To sort by column, click the header of the column.

Time Of Occurrence	Device	Function	State
5/29/02 4:54:56 PM	EGX400 P1 A2 CM2...	Current Avg	Light High & Fan Off
5/29/02 11:46:25 AM	EGX400 P1 A2 CM2...	Over Current Phase A	Dropout - OVER
5/29/02 10:46:49 AM	EGX400 P1 A2 CM2...	Over Current Phase A	Pickup - OVER
5/29/02 10:40:41 AM	EGX400 P1 A2 CM2...	Current Avg	Light High & Fan Low
5/29/02 9:33:26 AM	EGX400 P1 A2 CM2...	Current Avg	Light High & Fan Off
5/29/02 8:50:23 AM	EGX400 P1 A2 CM2...	Current Avg	Light High & Fan Off
5/29/02 8:38:27 AM	EGX400 P1 A2 CM2...	Current Avg	Light High & Fan Off
5/29/02 8:28:53 AM	EGX400 P1 A2 CM2...	Current Avg	Light High & Fan Off
5/28/02 4:57:04 PM	EGX400 P1 A2 CM2...	Current Avg	Light High & Fan Off
5/28/02 4:50:11 PM	EGX400 P1 A2 CM2...	Current Avg	Light High & Fan Off

Click the header to sort by column.
